Dear President Fry,

Thank you in advance for your time. I'm writing on behalf of People for the Ethical Treatment of Animals (PETA) and our more than 6.5 million members and supporters worldwide regarding an urgent matter. In response to the ongoing COVID-19 pandemic, Drexel University (DU) has "suspended on-campus, non-critical research activities starting March 18th."¹

Given the COVID-19 pandemic that is influencing the shut-down of animal experiments around the world,² we urge DU to immediately: 1) prohibit approval of new animal protocols and experiments; 2) prohibit breeding and acquisition of new animals for laboratories; 3) finalize and end ongoing animal experiments; and, 4) prove that all of these animals and experiments are concretely advancing human health, and if they're not then switch to superior human-relevant, animal-free research methods.³

COVID-19: Ending Animal Experiments Protects Animals, Staff, and Patients

DU is apparently implementing a contingency plan to suspend "on-campus, non-critical research activities," urging its experimenters to "cull all non-critical animals" and stating that "[n]on-critical animals should be euthanized."⁴ This begs the question why taxpayer dollars are being used on experiments that can easily be ended or that involve animals who, apparently, are considered extraneous to the testing in the

first place. Equally troubling is that the experiments themselves are not critical to advancing human health, since more than 90 percent of highly promising basic science discoveries (most of which involve animal experiments) do not enter routine clinical use in humans.⁵

We call on DU to publicly release the following information:

- 1) An itemization of all experimental protocols that will continue as part of DU's COVID-19 response plan (such that they may be categorized as critical, essential, necessary, and/or other similar terminology);
- 2) An itemization of all experimental protocols that will not continue as part of DU's COVID-19 response plan (such that they may be categorized as extraneous, non-critical, non-essential, ramped down, disposable, unnecessary and/or other similar terminology);
- 3) The number and species of animals who are in experimental protocols covered by item number 1 above (e.g., in a "critical" and/or other similar terminology category), and the number and species of animals who are in experimental protocols covered by item number 2 above (e.g., in a "non-critical" and/or other similar terminology category); and,
- 4) The endpoint/disposition of animals used in experimental protocols covered by item number 2 above (e.g., in a "non-critical" and/or similar terminology category), and notice of if, when, and how many of these animals have been and/or will be euthanized, culled, killed, destroyed, disposed or reduced in cage census.

You can contact me directly by e-mail at ShalinG@peta.org or by telephone at 757-962-8325. We look forward to your swift reply to this quickly developing and urgent matter. Thank you.

Sincerely yours,

Shalin G. Gala
Vice President, International Laboratory Methods
Laboratory Investigations Department
