Vegan Egg Replacers
Recipes that call for eggs are easy to veganize. One mashed banana can replace one egg in pancakes and dessert breads. Use ½ can diet soda or ¼ cup of applesauce plus ½ teaspoonful of baking powder as a leavening agent for cakes and other baked goods instead of an egg. One tablespoonful of ground flaxseed mixed with 3 tablespoonfuls of water can also replace an egg when you need a binder. And you can use 2 tablespoonfuls of aquafaba instead of one egg white for a meringue or 3 tablespoonfuls to replace a whole egg. Go to PETA.org for more information, or try one of these premade egg substitutes.

Common Questions

Going vegan can prompt some questions from family members who are new to the idea. Just remember that adopting a vegan lifestyle is the best way to save animals and the planet and to improve your own health. Here are some answers to questions that could come up:

What’s the difference between a vegetarian and a vegan?
Vegetarians don’t eat animal flesh, whereas vegans don’t consume anything that comes from an animal, including eggs, dairy, and honey. Going vegan is the only way to prevent animals from suffering for our food. Each vegan saves nearly 200 animals a year. Vegans know that it’s unacceptable to exploit animals for any reason, so they also avoid using products from companies that conduct or pay for cruel tests on animals, refuse to wear clothing made from animals, and don’t support the use of animals in entertainment.

Isn’t going vegan really expensive?
Meat, dairy, and eggs can be very expensive, while high-protein vegan foods like beans, rice, pasta, greens, and lentils are much cheaper and healthier. There are many wallet-friendly brands of nondairy milk and tofu, too. Go to PETA.org/Recipes for simple, affordable ideas and check out PETA’s Vegan College Cookbook, which features more than 275 easy recipes that are perfect for a tight budget.

What’s speciesism?
Speciesism is the idea that humans are superior to all other animals and that some animals deserve more consideration than others. It’s a toxic mindset that makes otherwise kind and reasonable people act completely illogically—like a family whose members cherish their dog but gather around the table to eat a turkey. Speciesism is what allows us to justify harming and exploiting others based on the way they look.

Do vegans get enough vitamins and other nutrients?
Eating vegan is extremely healthy! Wholesome plant-based foods contain no cholesterol, are often low in saturated fats, and are full of protein, iron, calcium, and other nutrients. On average, vegans have a lower rate of obesity and are less likely to suffer from heart disease, cancer, and strokes, which are among the leading causes of death in the U.S.

If your family still struggles with your refusal to eat animal-derived foods, talk to them before the holidays and let them know that this is very important to you. Offer to cook with them and show them how easy it is to swap non-vegan ingredients for vegan ones. And don’t expect them to go vegan with you right away—just lead by example, stay positive, and stick to your convictions.
