Cumberland, MD 21502

Customer ID: **15730**

Certificate: **51-C-0064**

Site: 001

TRI STATE ZOOLOGICAL PARK OF WESTERN MARYLAND

Type: FOCUSED INSPECTION

Date: 06-OCT-2016

2.40(b)(2) DIRECT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

***The 13 year old male lion is not in good health or body condition. He appears thin and the pelvic bones are prominent. His coat is rough and has turned a dark brown. And, the mane has thinned as would be seen on a one year old lion. There is also a watery discharge around the lion's eyes.

A dose of testosterone and a course of antibiotic has been administered per the veterinarian's instruction. However, the condition of the animal is not much improved. Although the lion has been under a veterinarians's care, a diagnosis has not been determined. An illness left undiagnosed can lead to suffering of the animal. An examination by a veterinarian with exotic cat experience is needed to determine the cause of the lion's weight loss and generalized unthriftiness to determine the appropriate options for treating the lion's condition.

Correct by October 10, 2016

This is a focused inspection to check the care and welfare of a white pig and the male lion.
This inspection and exit interview were conducted with owner.
