Type: ROUTINE INSPECTION

Date: May-04-2015

2.40 (b) (2) REPEAT

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

This was a focused inspection to review the progress of the facial lesions for the singly housed black bear. the facility called another veterinarian to examine the bear. The veterinarian consulted veterinarians at the North Carolina Zoo which recommended to change antibiotics and add additional medication. No diagnostic procedures were performed because there were not adequate methods available.

Facility needs to continue to administer the prescribed medications as indicated by the veterinarian and additional consultants for treatment and diagnostic evaluations to insure the care and comfort of the animal.

The goat enclosure was not inspected at this time and facility is reminded of its correction date of May 15,2015

Exit interview took place at the end of inspection

Type: ROUTINE INSPECTION

Date: Apr-29-2015

2.40 (b) (2) DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

The singly housed black bear has severe facial lesions which started on March 8, 2015. The end of the bear's nose has erosions and is red raw. The corneas of both eyes are red and clouded over affecting vision. There are crusty plaques from the nose to the eyes along the top of the muzzle. The attending veterinarian was out the next day and started the bear on injectable and oral antibiotics. He rechecked the bear once while it was on antibiotics for two weeks. The licensee called the veterinarian to come back out last week and the bear was observed 3 days ago. The veterinarian did not offer any diagnostic or treatment options, but stated as long as the bear was not suffering and was eating - indicating nothing further.

This bear is suffering in that it is losing its vision and has facial lesions which may be irritating. A full diagnostic workup is needed to determine the cause of the lesions so that adequate treatment can be initiated. If the attending veterinarian will do the diagnostic work up, he should do it in consultation with a veterinarian who has experience with bears so that a correct diagnosis and treatment can be initiated.
To be corrected by 5-1-15.

3.125 (a)

FACILITIES, GENERAL.

A goat enclosure with 22 goats has some structural items needing repair. These include protruding nail heads on the top of the goat walk and several loose wires along the bottoms of the chain link tree wraps. These items need to be repaired to prevent potential injury to the animals. To be corrected by 5-15-15.

Exit briefing conducted with facility representative.

Date: Aug-15-2011

2.40 (b) (3) DIRECT NCI

ATTENDING VETERINARIAN AND ADEQUATE VETERINARY CARE (DEALERS AND EXHIBITORS).

Daily observation of all animals to assess their health and well-being; Provided, however, That daily observation of animals may be accomplished by someone other than the attending veterinarian; and Provided, further, That a mechanism of direct and frequent communication is required so that timely and accurate information on problems of animal health, behavior, and well-being is conveyed to the attending veterinarian;

***One male lion "Little Leo" was observed with areas of irritated skin on portions of the lower back legs and some spots of irritation on the lower front legs. Small sand gnats were observed around these irritated areas. This had not been noticed by the facility and the attending veterinarian had not been contacted. Need to carefully observed animals daily for conditions such as this and communicate findings to attending veterinarian so that veterinary evaluation can take place. Correct by August 17, 2011.

3.125 (a)

FACILITIES, GENERAL.

Structural strength. The facility must be constructed of such material and of such strength as appropriate for the animals involved. The indoor and outdoor housing facilities shall be structurally sound and shall be maintained in good repair to protect the animals from injury and to contain the animals.

***In Sykes guenon enclosure, there is a rusted-thru metal support pole at the bottom front of the cage. Need to replace rusted pole to prevent injury and to assure structural strength of cage. Correct by September 1, 2011.

Type: ROUTINE INSPECTION

Date: Sep-01-2010

WILMINGTON, NC 28412

3.81 (a)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

Section 3.81(a) states "Social grouping. The environment enhancement plan must include specific provisions to address the social needs of nonhuman primates of species known to exist in social groups in nature. Such specific provisions must be in accordance with currently accepted professional standards, as cited in appropriate professional journals or reference guides, and as directed by the attending veterinarian."

The facility's Plan for Primate Enrichment does not adequately address how the social needs of the nonhuman primates will be met. Of the 27 nonhuman primates, only two are currently singly housed, a male lion tailed macaque and a male Sykes guenon. The plan needs to be updated to describe social housing of the current primates (including if infants will be left with parents) and describe what attempts have been made to meet the social needs of the two singly housed nonhuman primates. If these nonhuman primates cannot be paired with other nonhuman primates of the same or other species, then the plan needs to describe what other means will be provided to meet their social needs. The plan and the single housing need to be approved by the attending veterinarian. To be corrected by 10-1-10.

3.81 (b)

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

Section 3.81(b) states "Environmental enrichment. The physical environment in the primary enclosures must be enriched by providing means of expressing noninjurious species-typical activities. Species differences should be considered when determining the type or methods of enrichment. Examples of environmental enrichments include providing perches, swings, mirrors, and other increased cage complexities; providing objects to manipulate; varied food items; using foraging or task-oriented feeding methods; and providing interaction with the care giver or other familiar and knowledgeable person consistent with personnel safety precautions."

Although there are 27 nonhuman primates consisting of 11 different species, the facility's Plan for Primate Enrichment makes no distinction between the enrichment needs of these primates. Although many ideas are presented in the plan, none of the items listed (foraging devices, activity boards, tube feeders, pine cone feeders, ceiling puzzles, tree limbs) were seen in use today, nor are they available. Only balls were seen in two cages, but no other manipulanda,

Inspection Report

or foraging materials were available. Although the cages are large and have logs, perches, some swings, and a few ropes, more structures for brachiating are needed for the spider monkeys who are in the corn crib type where they cannot brachiate along the cage top. Because all enclosures but one have concrete bottoms, there is no real foraging of food placed on the bottom of the cage unless some sort of substrate is provided. Because foraging is talked about in the plan, it needs to be implemented in ways that promote species typical behaviors and provides a time consuming task.

There are three young (under 3 years old) snow macaques housed together in a corn crib with a perch and two tire swings. One was observed to be pacing the cage and head tossing, one was repetitively doing back flips (something she was taught as a baby), and one was slightly rocking. These are all stereotypic behaviors which can be caused by the need for stimulation. All of the nonhuman primates need to be provided routine enrichment items, but the needs of these 3 in particular need to be addressed.

To be corrected by 10-1-10.

Exit briefing conducted with facility representative.

INSPECTION REPORT

3.81

ENVIRONMENT ENHANCEMENT TO PROMOTE PSYCHOLOGICAL WELL-BEING.

Dealers, exhibitors, and research facilities must develop, document, and follow an appropriate plan for environment enhancement adequate to promote the psychological well-being of nonhuman primates. The plan must be in accordance with the currently accepted professional standards as cited in appropriate professional journals or reference guides, and as directed by the attending veterinarian. This plan must be made available to APHIS upon request, and, in the case of research facilities, to officials of any pertinent funding agency. The plan, at a minimum, must address each of the following:

(a) Social grouping. All redactions on this page are pursuant to (b)(6) & (b)(7)(c).

The environment enhancement plan must include specific provisions to address the social needs of nonhuman primates of species known to exist in social groups in nature. Such specific provisions must be in accordance with currently accepted professional standards, as cited in appropriate professional journals or reference guides, and as directed by the attending veterinarian.

Individually housed nonhuman primates must be able to see and hear nonhuman primates of their own or compatible species unless the attending veterinarian determines that it would endanger their health, safety, or well-being.

(b) Environmental enrichment. The physical environment in the primary enclosures must be enriched by providing means of expressing noninjurious species-typical activities. Species differences should be considered when determining the type or methods of enrichment. Examples of environmental enrichments include providing perches, swings, mirrors, and other increased cage complexities; providing objects to manipulate; varied food items; using foraging or task-oriented feeding methods; and providing interaction with the care giver or other familiar and knowledgeable person consistent with personnel safety precautions.

(c) Special considerations. Certain nonhuman primates must be provided special attention regarding enhancement of their environment, based on the needs of the individual species and in accordance with the instructions of the attending veterinarian. Nonhuman primates requiring special attention are the following:

(1) Infants and young juveniles;

(2) Those that show signs of being in psychological distress through behavior or appearance;

***There is no written program for environmental enrichment available for review. Need to consult with attending veterinarian and develop an appropriate plan to address the enrichment needs of all primates, especially the singly-housed primates and the capuchin that is showing signs of psychological distress. Also one mandrill cannot see another primate. Need to remedy this situation so that all primates can see and hear other primates.

APPLICANT HAS TWO MORE OPPORTUNITIES TO PASS INSPECTION PRIOR TO MARCH 8, 2004. NO COVERED ACTIVITIES (INCLUDING EXHIBIT OR SALE OF COVERED ANIMALS) IS PERMITTED UNTIL USDA LICENSE IS OBTAINED. PLEASE CONTACT INSPECTOR WHEN READY FOR NEXT INSPECTION.
