

### **Vaccination Guidelines for Nonsurgical Patients**

Thank you for using PETA's mobile clinics! Vaccinations for nonsurgical patients are available between 10 and 11 a.m. Monday through Saturday. While appointments aren't required, certain guidelines must be met in order for your animal to qualify for services. These are based on what is safest and the best medically for your animal companion.

Please note that we will not vaccinate the following:

- Intact (unspayed/unneutered) companion animals over 6 months of age
- Any companion animals over 10 years of age
- Companion animals with any known illness, injury, or medical condition
- Animals who are aggressive toward humans or other animals

Vaccinations will be available for puppies and kittens upon presentation of proof of a health examination by a licensed veterinarian.

Three-year rabies vaccinations will be administered upon presentation of proof of a prior rabies vaccination. In the absence of such proof, rabies certificates will be valid for one year.
