LARRY WALLACH

Type: ROUTINE INSPECTION
Date: 09-JUN-2021

2.75(b)(1)

Records: Dealers and exhibitors.

Item 2.75 b 1 Records (Dealers and Exhibitors)

The licensee maintains a wallaby and a sloth and did not have records which disclosed the acquisition information on the wallaby. Also, the licensee exhibited a serval in Aug of 2020 to the public in a park. The licensee did not provide the USDA any documentation or records concerning this animal. The following information is required on all animals maintained by an exhibitor: the name and address of the person from whom the animal was acquired, the USDA license if that person is licensed, the vehicle license number and State, and the driver's license number, the date of purchase or acquisition, and the species and number of animals in the shipment. The licensee must make, keep, and maintain documents which fully and correctly disclose the required information concerning animals held, owned, or otherwise in his possession, or under his control.

Correct for the serval and for all animals from this day forward 6/9/2021

2.131(c)(1)

Handling of animals.

2.131(c)(1)

Handling of animals.

Inspection Report

In Aug. 2020, the licensee took a tiger cub, that according to records provided by the licensee was approximately 6 weeks old, to a park where the public had direct contact to handle and pet the cub. The licensee did not restrict access to the unleashed cub and did not maintain a barrier, allowing the cub to walk among the crowd.

During public exhibition, the licensee must ensure that any animal must be handled so there is minimum risk to the animal and public, with sufficient distance and/or barriers between the animal and the public.

Correct from this day forward 6/9/2021

3.125(a) Repeat

Facilities, general.

Facilities General 3.125 a Repeat

At the time of inspection, the licensee is housing a sloth in an enclosure in a garage. Hanging from the ceiling in the interior of the sloth enclosure, is a light fixture and on the floor of the interior is a portable electric humidifier with the cord exposed. The sloth has access to the exposed light and the humidifier, which could injure the animal by burning, broken glass, or electrical shock. The sloth's enclosure is covered by a fabric tarp, which is a potential fire hazard as the humidifier and the light fixture have exposed electrical wires. The licensee must ensure that housing facilities are maintained in good repair to protect the animal from injury.

3.127(d) Repeat

Facilities, outdoor.

Item 3.127 (d) Repeat

At the time of inspection, the wallaby was housed in an outdoor enclosure. The fences on two sides of the enclosure are 6 ft high, however the back fence is only 39 inches high. There is not a perimeter fence of sufficient height that functions as a secondary containment system to prevent the wallaby from escaping.

Inspection Report

Sanitation.

Item Sanitation 3.131 c

At the time of inspection, the licensee is housing a sloth in an enclosure in a garage. The room contains many varying sized items stacked and placed on the floor as well as bicycles that are hanging from the ceiling. These items clutter the space surrounding the enclosure and do not pertain to the animal or its care. Premises shall be kept clean and in good repair to protect the animals and to facilitate the prescribed husbandry standards.

Correct by 6/17/2021

This inspection and exit interview were conducted with the licensee.
