Dear Drs. Goldentyer and Gibbens:

Thank you in advance for your time. I'm writing on behalf of People for the Ethical Treatment of Animals (PETA) to request that the U.S. Department of Agriculture (USDA) Animal and Plant Health Inspection Service (APHIS) investigate what appears to be widespread failure among registered research facilities, licensed dealers, accredited veterinarians, and registered carriers to abide by federal Animal Welfare Act (AWA) regulations established to ensure the safe and legal movement of primates throughout the U.S.

The January 21 accident near Danville, Pennsylvania, between a dump truck and a trailer hauling 100 primates—who had just arrived in the U.S. to eventually be shipped to laboratories—propelled the murky world of primate transport into the public eye. The crash made international headlines; however, this shipment of 100 long-tailed macaques represents only a tiny fraction of the total number of primates transported across our country on an annual basis.

Through the Freedom of Information Act, PETA has received certificates of veterinary inspection (CVIs) from multiple state agencies documenting the veterinary inspection required for the inter- and intra-state transport of primates among facilities.

CVIs serve as records of the movements of primates and are essential in the surveillance, control, and eradication programs for many pathogens. PETA's documentation shows that multiple facilities—including those that shipped monkeys, those that received monkeys, veterinarians, and carriers—have apparently violated Animal Welfare Regulations (AWRs).

As you know, CVIs are signed by USDA-accredited and state-licensed veterinarians. They are legal, regulatory documents required by law to be completed no more than 10 days prior to the delivery of primates. Carriers may only accept primates for transportation if the animals are accompanied by a valid CVI.

**9 CFR § 2.78(a)(1):** “No dealer ... shall deliver to any intermediate handler or carrier for transportation, in commerce, or shall transport in commerce ... any ... nonhuman primate unless the ... nonhuman primate is accompanied by a health certificate executed and issued by a licensed veterinarian [stating that] the licensed veterinarian inspected the ... nonhuman primate on a specified date which shall not be more than 10 days prior to the delivery of the ... nonhuman primate for transportation.”

**9 CFR § 2.78(a)(2)(c):** “No intermediate handler or carrier to whom any live ... nonhuman primate is delivered for transportation by any dealer, research facility, exhibitor, broker, operator of an auction sale, or department, agency, or instrumentality of the United States or any State or local government shall receive a live ... nonhuman primate for transportation, in commerce, unless and until it is accompanied by a health certificate issued by a licensed veterinarian in accordance with [9 CFR § 2.78(a).”

**9 CFR § 2.38(h)(1)(i):** “No research facility, including a Federal research facility, shall deliver to any intermediate handler or carrier for transportation, in commerce, or shall transport in commerce any ... nonhuman primate unless the ... nonhuman primate is accompanied by a health certificate executed and issued by a licensed veterinarian. The health certificate shall state that ... the licensed veterinarian inspected the ... nonhuman primate on a specified date which shall not be more than 10 days prior to the delivery of the ... nonhuman primate for transportation.”

Table 1 summarizes the CVIs that we believe show that veterinarians, research facilities, and carriers have failed to comply with the AWRs noted above. Our documents cover a recent 17-month period, over which we identified 56 apparent violations of the AWRs, involving more than 1,881 primates from five research facilities or dealers across sites in five states. The primates were shipped to nine research facilities or intermediate handlers in 10 states. The failure of USDA-certified veterinarians to conduct timely inspections of the primates before and/or after movement across state lines poses enormous risk to the monkeys in transport, who may not be well enough to survive the stressful trips, as well as the monkeys at the destination facility, who risk exposure to pathogens that the newly arrived animals may be shedding. The public health risk to the transport, husbandry, and research staff is obvious.

The trauma and stress associated with international importation, warehousing, and subsequent domestic transport guarantees that monkeys arrive and move throughout the U.S. with compromised immune systems.<sup>1</sup> Primates used in testing and experimentation frequently carry unintended and/or undetected zoonotic diseases, including those listed on the [Centers for Disease Control and Prevention notifiable diseases list](#), such as campylobacteriosis, cholera, cryptosporidiosis, salmonellosis, shigellosis, measles, hepatitis A, tuberculosis, and malaria. The primate-experimentation community continues to acknowledge that screening assays for tuberculosis, in particular, lack sensitivity and specificity<sup>2</sup> and that opportunistic zoonotic

Inappropriate veterinary inspections and the failure to comply with 9 CFR § 2.38(h)(1)(i), 9 CFR § 2.78(a)(1), and § 2.78(c)(2) increases the public health risk for staff transporting the monkeys, staff at the receiving institutions, and potentially the public at large if, as we saw earlier this year in Pennsylvania, the primates gain access to the general public during transport.

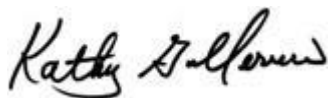

The 56 cases documented in this complaint are likely only a small fraction of cases in this timeframe, as many state agencies with which PETA filed records requests do not retain the documents, use a format that does not require listing some of these dates, or sent documents that were significantly redacted.

We also note that there are 45 primates who, for reasons that remain unclear, were scratched from shipments. Exhibits 40, 45, 46, 47, 48, 50, and 51 appear to indicate that despite being inspected and cleared for transport by veterinarians, these animals were not included in the shipment. This raises the question of what happened to these animals—were they removed from the shipment because of injury or illness? Did they die before leaving the originating facility? Did they die in transit? Or were they dead on arrival at the receiving facility?

The public expects that USDA-accredited veterinarians and primate facilities comply with federal regulations designed to safeguard animal welfare and protect public health. In order to uphold your mission to the American public, we urge you to initiate an investigation led by the USDA's Investigative and Enforcement Services for the cases we've outlined here and open a wider investigation into the pattern of veterinarians, dealers, and research facilities failing to uphold the AWA requirements for primate transportation inspections. Where appropriate, we ask that you suspend or revoke licenses or accreditations and/or pursue civil and/or criminal penalties through the USDA Office of the General Council and/or the U.S. Department of Justice.

Thank you for your time and consideration.

Sincerely,

Kathy Guillermo
