

PETA's Mobile Clinics
Division has spayed or
neutered 213,390 animals
since 2001!

# Preventing Animal Homelessness

During this quarter, the veterinary staff of our mobile spay/neuter clinics sterilized **2,816** animals, including **Susie Q**, **Cairo**, and **Lulu-Basil**, who were among the **165** animals PETA's Community Animal Project fieldworkers transported for free to and from their no-cost spay/neuter appointments. We also groomed **Marley**, whose coat was painfully matted, at the time of his neutering—all free of charge for his grateful guardian.

# Community Outreach

Through our **Barks & Books** program, we continued to distribute children's books with animal-friendly themes to kids we met in the field and at our spay/neuter clinics.

As part of a local city council member's holiday **food drive**, we offered spay/neuter surgeries on our mobile clinic in exchange for 10 nonperishable vegan food items—resulting in 31 sterilizations and donations of more than 200 food items!

## **Shelter Partnership Placements**

We transferred 143 animals to our shelter partners for adoption.

We secured custody of Sadie, who had been forced to live outside on a chain. We transferred her to the Virginia Beach SPCA, where she was quickly adopted through a program that matches veterans with animal companions.

We also got custody of Lucky and Bentley, who had been kept chained outside without shelter. We transferred Lucky to the Chesapeake Humane Society and Bentley to the Norfolk SPCA for a chance at adoption. They were among the 802 animals our shelter took in this quarter.

PETA often subsidizes the cost of veterinary care when we transfer animals to our placement partner shelters.

# Helping People Keep and Care For Their Animals

This quarter, we spent nearly \$771,550 on local services.

One of the **560** requests for assistance that PETA received this quarter was for **Baby**, a senior cat whose long hair had become painfully matted. We groomed her and provided her with extra food—all free of charge. Her guardians are among the **300** families we assisted in keeping their animal companions.

PETA helped protect "outside dogs" like **Soldier**—kept chained or penned outdoors 24/7—from the increasingly cold weather by providing sturdy doghouses and insulating straw bedding. We also made sure they had food, water, and treatment for parasites, and we replaced short, heavy chains with 15-foot lightweight tie-outs.

This quarter, we delivered custom-built, insulated doghouses to 63 dogs kept outdoors day and night in all weather extremes.

### Free End-of-Life Services

After elderly cat **Mischief** was diagnosed with heart failure and stopped eating and drinking, his family brought him to PETA's shelter for free end-of-life services. He was one of 185 animals we euthanized at no cost to families who couldn't afford this vital humane service. His guardians filled out postcards asking their state legislators to safeguard our ability to offer end-of-life relief. This quarter, **638** of our constituent families (like Mischief's) sent postcards to their elected officials in support of our services, including

compassionate euthanasia.

Mischief has difficulty breathing won't eat, can't stand properly, and is extremely weak. PETA helped us immediately with desparately needed end-of-life comfort and care when no one else was available.

PETA is very Cenna and understanding on Situations. When a feet has to be EMMANIZED

When elderly, cancer-ridden dog Chowder fell off the back porch and crawled under the house, his owner was unable to get him out from under there himself. We retrieved Chowder and gently ended his suffering. He was among the 640 animals we euthanized this quarter.

We gave free end-of-life emergency aid to **Snowflake**, a dying "outdoor cat" suffering from weight loss, ruptured and infected tumors and eyes, and labored breathing.

Among the animals

we euthanized were 320 **feral cats** suffering from conditions that included advanced upper respiratory infections, diarrhea, dehydration, internal and external parasites, anemia, cancer, feline immunodeficiency virus, panleukopenia, immobility, severe neurological problems, ulcerated or ruptured eyes, traumatic injuries, prolapsed organs, and infected wounds.
