#### 3.126(d)

##### Facilities, indoor.

The facility currently has 4 otters in an enclosure designed for 2. The extra animals cause the enclosure floor to remain wet constantly from the otters jumping in and out of their pool. The only dry area is inside a pool that is not being used for water because it doesn't drain properly. Continuous exposure to wet surfaces, especially a dirty, wet floor, could predispose these animals to health issues, especially skin infections.

A suitable sanitary method shall be provided to eliminate rapidly, excess water from indoor housing facilities and provide sufficient dry area for the animals.

Correct by: Feb 1, 2024

#### 3.131(a)

Repeat

##### Sanitation.

- The porcupine enclosure is not being cleaned often enough to minimize pests and odors and allow the porcupine sufficient area free of excreta. Much of the shavings in the enclosure were wet, either from urine or a leaky water bottle. There was an abundance of flies in the enclosure and the area where the Turaco food bowl was hanging had a large amount of dried food and bird feces stuck to the wall. The porcupine enclosure is approximately 10 'x 6', with a large portion of the floor space used for artificial boulders. This does not leave much available area for the porcupine to move around, let alone use the bathroom multiple times and still be able to avoid his excreta. Inefficient cleaning of enclosures can predispose the animal to illness and disease and attract pests.

- The kinkajou enclosure is not being cleaned regularly because facility personnel are not able to enter the enclosure due to the kinkajou's aggressive behavior. There was a collection of old food on the floor and the feeding shelf. Old food attracts flies and other pest and could possibly cause illness in the animal. A method for safely and regularly cleaning the kinkajou enclosure needs to be implemented.

Primary enclosures need to be cleaned as often as necessary to prevent contamination of the animals contained therein and to minimize disease hazards and to reduce odors.

### Inspection Report

---

**3.131(d)**

**Sanitation.**

A large number of flies were seen in multiple animal enclosures. Flies are annoying to the animals and can transmit disease and illness.

A safe and effective program for the control of insects, ectoparasites, and avian and mammalian pests shall be established and maintained.

Correct by: January 22, 2024

This inspection and exit interview were conducted with facility representatives.
