Inspection Report

Oregon Health and Science University 3181 S W Sam Jackson Park Rd., #L335 Portland, OR 97239

Customer ID: 1046

Certificate: 92-R-0001

Site: 002

OREGON HEALTH & SCIENCE UNIV./WEST CAMPUS

Type: ROUTINE INSPECTION

Date: 15-OCT-2024

2.38(f)(1)

Miscellaneous.

On July 12, 2024, an 8-year-old male rhesus macague was injured following an unintended interaction with another adult macague that escaped during a cage transfer. The animal was treated for a laceration on the palm of the left hand. Handling of nonhuman primates shall be done as carefully as possible in a manner that does not cause trauma, behavioral stress, physical harm, or unnecessary discomfort. The research facility must ensure that all animals are protected from harm and distress.

Corrected prior to inspection on October 15, 2024

3.80(a)(2)(iv)

Primary enclosures.

On January 28, 2024, an 18-year-old male rhesus macaque sustained lacerations to the head and base of the right ear when a mesh slide was pushed out, which then allowed unintended direct contact with a single male macaque in an adjoining enclosure. One of the primates was able to push the mesh slide between the enclosures, allowing unwanted contact between the macagues causing distress and injury in this animal. Primary enclosures must be constructed and maintained so that they keep other unwanted animals from entering the enclosure or having physical contact with the nonhuman primates. The research facility must ensure the enclosures protect the animals from injury and distress. Corrected prior to inspection on October 15, 2024

This inspection and exit interview were conducted with facility representatives.
