AGULUX LABORTORIES

Type: ROUTINE INSPECTION

Date: 24-JUN-2024

3.6(c)(1)(i)

Primary enclosures.

Facility personnel were in the process of cleaning and sanitizing dog primary enclosures in one of the housing rooms at the time of the inspection. The dogs were moved temporarily from their primary enclosures into one of the enclosures in a rack of rolling kennels while their primary enclosures were being cleaned/sanitized. The average length of the dogs measured from the tip of their nose to the base of their tail was 26 inches and each enclosure in the rolling kennel measured 28" long (2.333 feet) x 22" wide (1.833 feet); total floor space of 4.276 square feet per enclosure.

Per this Section, dog primary enclosures must meet minimum space requirements for animal's well-being. The minimum space requirement is determined from the mathematical square of the length of the dog in inches (measured from the tip of its nose to the base of its tail) plus 6 inches; then divide the product by 144. Using this formula, enclosures having total floor space of 4.276 square feet provide the minimum floor space for dogs with a nose to tail base length of 18 inches or less; the minimum amount of floor space for dogs with a nose to tail base length of 26 inches is 7.11 square feet. Correct by 8/26/24.

This inspection and exit briefing were conducted with facility representatives.
